

Gotoh Humbucker Tele® Flat Mount Bridge Diagram

This top quality bridge features a 1/8" thick brass plate with vintage spec mounting and string through holes. The bridge width exceeds that of the standard bridge (a necessity to accommodate the humbucking pickup) and will require that the standard pickguard be modified in this area. We offer pickguards to fit. The string spread is 2-1/16" (52.4mm). The strings pass through the bridge to anchor in the back of the guitar body.
