

Stratocaster® Flat Mount Bridge With Narrow String Spacing (Pitch)

This custom bridge has the appearance of the vintage style Strat® flat mount bridge and mounts in the vintage spec mounting holes. The saddles, however, are narrower with a string spread of 2-1/8" (54mm) which is very similar to the newer American Standard Fender bridges, although, it is not a direct replacement for it. To use this bridge on a vintage spec body, the string through body holes must be enlarged from 1/8" to 3/16" (4.7mm) to allow the strings easy access to the narrower saddle spacing. The string saddles are notched at the break over point to maintain precise string pitch.
